

PVC Fiber Reinforced Hose

Applications

This hose is ideal for the supply of water, gas and oil for commonly used equipment in industry, agriculture, fishery, construction and home furnishing. It is suitable for use in the food industry, and consists of specially processed raw materials. The hose is non-toxic and odorless. It can be used in vending machines, ice machines, refrigerators and other equipment for the delivery of milk, beverages, liquor, beer, jam and other foods.

PVC STEEL WIRE HOSE

SNOW, since its establishment in 1986, has evolved into a comprehensive multinational brand specializing in pipeline and building materials with diversified development. Its business portfolio spans pipelines, building materials and home furnishings, new energy, and other sectors. The product range covers pipelines, plumbing and bathroom fixtures, waterproofing, resin tiles, and photovoltaics. SNOW is recognized as the world's largest manufacturer of piping systems.

Committed to research and innovation, SNOW boasts a dedicated team of over 1,000 researchers. The brand has played a pivotal role in developing and revising more than 120 international, national, and industry standards. With an active globalization strategy, SNOW continues to expand its footprint in the international markets, with over 30 major production bases established worldwide. Its industrial and sales network covers Asia, North America, South America, Europe, Africa and Oceania, ensuring a timely and efficient delivery of high-quality products and services across continents.

PVC Steel Wire Hose

Applications

This product can be widely used in the food and health industries, and is ideal for pumping and transporting water, oil and powder in industrial, agriculture and engineering applications. The hose is suitable for use in the food industry, and consists of specially processed raw materials. It is non-toxic, odorless and highly transparent. It is ideal for the delivery of milk, beverages, liquor, beer, jam and other foods. Copper wire can also be implanted into the hose for applications in locations prone to static electricity, in order to prevent hose blockage. This will also prevent the user from suffering a static or electric shock.
